

DISCRETE DIE BURN-IN FOR NONPACKAGED DIE

ABSTRACT

5 A reusable burn-in/test fixture for discrete TAB die
consists of two halves. The first half of the test fixture
contains cavity in which die is inserted. When the two
halves are assembled, the fixture establishes electrical
contact with the die and with a burn-in oven. The test
fixture need not be opened until the burn-in and electrical
test are completed. The fixture permits the die to be
10 characterized prior to assembly.
